FUNCTION: Receptor for a C-C type chemokine. Binds to eotaxin, MCP-3, MCP-4 and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level (By similarity).
-i. SUBCELLULAR LOCATION: Integral membrane protein.
-i. SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE FROM N.A. -!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Detected in the heart, spleen, lung, peritoneal exudate cells and leukceytes.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CKR3 RAT STANDARD; PRT; 359 AA.

Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for a C-C type chemokine. Binds to ectaxin,
MCP-3, MCP-4 and RANTES and subsequently transduces a signal by
increasing the intracellular calcium ions level (By similarity)
-!- SUBCELIULAR LOCATION: Integral membrane protein.
-!- TISSUB SPECIFICITY: Expressed in spleen but not in astrocytes or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                       -!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

"Cloning and differential tissue-specific expression of three mouse beta chemokine receptor-like genes, including the gene for a functional macrophage inflammatory protein-1 alpha receptor.";
J. Biol. Chem. 270:17494-17501(1995).
-!- FUNCTION: Probable receptor for a C-C type chemokine.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- TISSUE SPECIFICITY: Detected in the spleen, liver and leukocytes.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-0CT-1993 (Rel. 27, Created)

Hum. Retroviruses 17:981-986(2001).

AIDS Res. Hum. Retroviruses 17:981-986(2001).

-! FUNCTION: RECEPTOR FOR A C-C TYDE CERMOKINE. BINDS TO MIP-1-ALPHA,
-! FUNCTION: RECEPTOR FOR STORING TO MIP-1-BETA OR MCP-1 AND
SUBSEQUENTLY TRANSDUCES A SIGNAL BY INCREASING THE INTRACELLULAR
CALCIUM IONS LEVEL. RESPONSIBLE FOR AFFECTING STEM CELL
PROLIFERATION.
-! SUBCELLULAR LOCATION: Integral membrane protein.
-! SUMICARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                15-UUL-1998 (Rel. 36, Created)

"Cloning and differential tissue-specific expression of three mouse "Cloning and differential tissue-specific expression of three mouse beta chemokine receptor-like genes, including the gene for a functional macrophage inflammatory protein-1 alpha receptor.";

J. Biol., Chem. 270:17494-1750[1995].

-I. FUNCTION: Receptor for a C-C type chemokine. Binds to eotaxin, MCP-3, MCP-4 and RANTES and subsequently transduces a signal by increasing the intracellular calcium ions level.

-I. SUBCELLULAR LOCATION: Integral membrane protein.

-I. TISSUE SPECIFICITY: Detected in skeletal muscle and in trace
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Molecular characterization of two murine eosinophil beta chemokine

C-C chemokine receptor type 4 (C-C CKR-4) (CCR-4) (CCR4)
(K5-5).
                                                                                                                                           -!-FUNCTION: Receptor for the C-X-C chemokine CXCL16. Used as a coreceptor by SIVs and by strains of HIV-2 and m-tropic HIV-1.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CCR4 OR CMKBR4.

Mediated by G(I) protectins which activate a phosphatidylinositcle calcium second messenger system. Can function as a chemokine colored primary HIV-2 isolates. In the CNS, could mediate hippocampal-neuron survival.

Mediate hippocampal-neuron survival.

J. SUBCELULAR LOCATION: Integral membrane protein.

J. SUBCELULAR LOCATION: Integral membrane protein.

J. SUBCELULAR LOCATION: Integral membrane protein.

J. TISSUE SPECIFICITY: Predominantly expressed in the the spleen and basophils, and in platelets; at lower levels, in the spleen and basophils, and in platelets; at lower levels, in the spleen and basophils, and in platelets; at lower levels, in the spleen cand in monocytes. Detected also in macrophages, IL-2-activated natural killer cells and skin-homing memory T cells, mostly the ones expressing the cutaneous lymphocyte antigen (CLA). Expressed in brain microravacular and coronary artery endothelial cells.

                                                                                                               -i- FUNCTION: Receptor for the C-X-C chemokine CXCL16. Used as a coreceptor by SIVs and by strains of HIV-2 and m-tropic HIV-1.
-i- SUBCELLULAR LOCATION: Integral membrane protein.
-i- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pan troglodytes (Chimpanzee).

AMEZESOS  AMEZES	; 18 AA. peptide #47. CD4; HIV; glycoprotein 120; gp120; antagonist; CD4; STRL33.  ' OS. OP.	nger C; 2001-244398/25.  It polypeptides useful for treating HIV infection, have homology to ons of domains of human chemokine receptors CCR5, CXCR4 and STRL33, binds to HIV gp120 under physiological conditions.  The l; Page 37; 114pp; English.  Present invention describes a number of peptides which are able to ito HIV glycoprotein 120 (gp120). These are similar to the human obvine receptors CCR5, CXCR4 and STRL33, as well as CD4. These are inl in the treatment of HIV, as they prevent replication of the virus. present sequence is an example of a peptide of the invention nence 18 AA;  Tatch  100.0%; Score 96; DB 4; Length 18;  Accord Similarity 100.0%; Pred. Chemokine receptor 88C; atherosclerosis; rheumatoid arthritis; tumour; asthma; viral infection; AIDS; inflammation; autoimmune disease; therapy; diagnosis; leukocyte trafficking; G protein coupled receptor; ligand; modulator; antibody; human.
                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is human CC (Cys-Cys) chemokine receptor 5 (CCR5), which is stimulated by MIP-1 alpha, MIP-1 beta or RANTES Chemokines, but not by monocyte chemoattractant protein 1 (MCP-1), MCP-2, MCP-3, interleukin-8 (IL-8) or growth related gene product alpha (GRO alpha) chemoxines. Active CCR-5 is also a receptor of human immunodeficiency virus type 1 or type 2 (HIV-1 or HIV-2). CCR5 or its cDNA can used to diagnose, treat and/or prevent inflammatory diseases, e.g. rheumatoid psoriasis, viral infections, especially HIV-1 or HIV-2 infection, cancer, atherosclerosis and autoimmune disorders
                                                                                                                                                                                                                                                                                                    Active and inactive forms of human CC chemokine receptor CCR-5 - useful to diagnose, prevent and/or treat inflammatory disorders, autoimmune disease and viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       100.0%; Score 96; DB 2; I 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a number of peptides which are able to bind to HIV glycoprotein 120 (gp120). These are similar to the human chemokine receptors CRSP, CXCR4 and STRL131, as well as CD4. These are useful in the treatment of HIV, as they prevent replication of the virus. The present sequence is an example of a peptide of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô
                                                                                                                                                                                                                                                                                                                                           This polypeptide sequence comprises novel human chemokine receptor 88C, a grotein coupled receptor that is involved in leukocyte trafficking. Its amno sequence was deduced from a cDNA clone (AAAT85161) isolated from a macrophage library. Its shows 62% identity to CCCKR1. Chemokine receptor 88-2B (see AAW27124) has also been identified. 88C and 88-2B receptors and their polypeptide fragments can be produced in transformed host cells. The receptors, peptides comprising one or more of the extracellular or intracellular domains, and anti-receptor antibodies can be used to modulate receptor activities, particularly ligand and G protein binding, and are potentially potentially useful in the treatment of atheroslerosis, inemmatoid arthritis, tumours, asthma, viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    G-protein chemokine receptor; HDGNR10; signal transduction; haematopoiesis; leukaemia; inflammation; rheumatoid arthritis; diagnosis;

                                                                                                                                                                                                                                              Novel human mature G-protein chemokine receptor HDGNR10 (AAW07602) is a 7-transmembrane protein involved in signal transduction. Its amino acid sequence was deduced from a cDNA clone (AAT44042) isolated from a human moncoyte library. Isolation of the cDNA allows prodn. of recombinant HDGNR10 in host, e.g. E. coli, COS or Sf9, cells. The recombinant erceptor can be used to identify agonists or antagonists of the receptor; such cpds. can be used to treat conditions related to the under- and over-expression of G-protein chemokine receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC chemokine receptor 5; CCR5; G-protein coupled receptor;
human immunodeficiency virus; HIV; CD4; AIDS; therapy; transgenic animal.
                                                                                                                                                Human G-protein chemokine receptor, HDGNR10 - useful to identify (ant)agonists, for treatment of haematopoiesis, leukaemia, chronic and acute inflammation, rheumatoid arthritis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

c co-receptor for infection by macrophage-tropic (M-tropic) strains of HIV-1. The invention relates to the identification of a CRS variant (see AAW88131), designated CRRAM303, comprising the first two transmembrane domains of wild-type CCRS, but lacking transmembrane domains 3-7. The command of wild-type CCRS, but lacking transmembrane domains 3-7. The command of wild-type CCRS, but lacking transmembrane domains 3-7. The command of wild-type CCRS allele shows a prostence of the CCRSM303 variant with the wild type CCRS allele shows a command may indicate slower progression of the disease. The strains, and may indicate slower progression of identify individuals at lower command of the confidence of the command of the command of the confidence of the command of the confidence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; G-protein coupled receptor; G-protein chemokine receptor; HDGNR10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New CCRS variant protein of the HIV-1 co-receptor - useful in developing resistance of CCRS-expressing cells to {
m HIV-1} infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This is the amino acid sequence of wild-type human CCRS, which serves as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This protein sequence comprises of a novel human macrophage-selective CC chemokine receptor that has been designated CCR5. The sequence was deduced from an isolated DNA clone (see Abr7620). An Ala127Leu variant (see WA38810 of CCR5 was also identified. The susceptibility of human macrophages to HIV infection depends on cell surface expression of CD4 protein coupled cell surface molecules. The susceptibility of figure in coupled cell surface molecules. It plays an essential role in the membrane fusion step of infection by some HIV isolates. The establishment of stable, non-human cell lines and transgenic mammals having cells that coexpress human CD4 and CCR5 provides valuable tools for research of HIV infection. Antibodies that bind to CCR5, CCR5 variants, and CCR5-binding agents capable of blocking membrane fusion between HIV and target cells represent potential anti-HIV therapeutics for macrophage tropic strains
                                                                                                                                                                                                                                                                                                                                                                                                                            CC chemokine receptor 5 polypeptide - used to inhibit membrane fusion between HIV and a target cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                HIV-1; CCR5; CCR5m303; co-receptor; infection; diagnosis; AIDS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ..

The present sequence represents a human G-protein chemokine receptor designated HDGNR10. HDGNR10 polynucleotides are useful in methods of screening to compounds which bind to and either: (1) activate the HDGNR10 polypeprides causing stimulation of haematopoiesis, wound healing, coagulation, and angiogenesis; treatment of solid tumours, chronic infections, leukaemia, T-cell mediated autoimmune diseases, parasitic infections, psoriasis, and to stimulate growth factor activity, or (2) inhibit activation of the HDGNR10 polypeptides which is useful for preventing and/or treating allergy, atherogenesis, anaphylaxis, malignancy, chronic and acute inflammation, histamine and immunoglobulin B-mediated allergic reactions, prostaglandin-independent fever, bone marrow failure, silicosis, sarcoidosis, rheumatoid arthritis shock and hyper-eosinophilia syndrome. The polynucleotides are also useful for diagnostic assays for detecting the polypeptides and for detecting an altered level of the soluble form of the receptor polypeptides. The polynucleotides are also useful for in vittor purposes related to mutations in the polynucleotides are also useful for in vittor purposes related to going the polynucleotides. The polynucleotides are also useful for in vittor purposes related to scientific research, synthesis of DNA and manufacture of DNA vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; receptor; DC-SIGN; dendritic cell; T lymphocyte; HIV; gpl20;

The specification describes an antibody which is specific for an antigenic fragment of gp120. This antigenic fragment binds to DC-SIGN or is exposed upon gp120 binding of DC-SIGN due to concomitant conformational change. DC-SIGN is a receptor that is specifically expressed on dendritic cells and facilitates infection of T lymphocytes with HIV. DC-SIGN is identical to a HIV-1 gp120-binding C-type lectin. DC-SIGN binds ICAM-3 (which is expressed constitutively on T lymphocytes) with high affinity. The antibody of the invention inhibits the trans enhancement of HIV entry into a T cell or macrophage facilitated by dendritic cells. The antibody is useful to treat or prevent HIV infection. The present sequence represents a human CGS protein, which is a translocation promoting agent that interacts with CD4. This receptor functions in HIV-1 entry into cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; G-protein chemokine receptor; CCR5; HDGNR10; inflammation; HIV; human immunodeficiency virus; antimicrobial; vascdllator; vulnerary; vytostatic; immunosuppressive; noctropic; neuroprotective; gene therapy; neurodegenerative disorder; Kaposi's sarcoma; autoimmune disease; rheumatoid arthritis; cancer; breast; ovary; adrenal gland; bone marrow; gastrointestinal tract; lung; liver; immune disorder; Addison's disease; haemolytic anaemia; autoimmune thyroiditis; diabetes mellitus; allergy; multiple sclerosis; ulcerative collitis; Crohn's disease; wound healing; cardiovascular disorder; myocardial ischaemia.

The invention relates to human G-protein chemokine receptor (CCR5) HDGNR10 polypeptides and polymucleotides. CCR5 HDGNR10 antibodies are useful for treating, preventing or ameliocating a disease or disorder associated with inflammation, defective or aberrant chemotaxis of immune cells, HIV infection (such as Pneumocystis carinii pneumonia or Kaposi's sarcomal or defective or aberrant T-cell antigen presenting cell interaction. The disease or disorder may also be an infectious disease (e.g. a viral infection such as an early stage HIV infection, a cytomegalovirus infection, or a poxvirus infection), an autoimmune disease (e.g. rheumatoid arthritis) or a neurodegenerative disorder. The disease or disorder may be associated with aberrant CCR5 expression, lack
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated nucleic acid encoding a human G-protein chemokine receptor (CCRS) HDGNR10 polypeptide, useful for preventing or treating autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders and

of CCR5 function, aberrant CCRS ligand expression, or lack of CCR5 ligand function. CCR5 HDGNR10 protein is used as a food additive or preservative to increase or decrease storage capabilities. CCR5 HDGNR10 DNA are useful for chromosome identification and in gene therapy. CCR5 HDGNR10 DNA, protein, antibodies, agonists and antagonists are also useful in the diagnosis, trearment and prevention of cancer (breast, ovary, adrenal gland, bone, bone marrow, gastrointestinal tract, liver, lung, urogenital); immune disorders (Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's lisease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis); cardiovascular disorders (Mpocardial ischaemias) and wound healing. The present sequence is human CCR5 HDGNR10 protein
                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  solated nucleic acid encoding a human G-protein chemokine receptor (CCRS) HDGNR10 polypeptide, useful for preventing or treating autoimmune liseases e.g. rheumatoid arthritis, hyperproliferative disorders and

at least in This invention describes a novel diagnostic agent (A) comprising two different ligands (I) for receptors (II) that are implicated

or prostatic), organ rejection, inflammation and autoimmune diseases.
Also inhibitors of (I) are used therapeutically against tumors (and their metastases), inflammation (particularly bronchial asthma or chronic bowel inflammation), or autoimmune diseases (Theumatcoid arthritis or lupus), where the (cardio) vascular, lymphatic, respiratory, nervous, digestive, endocrine, motor or urogenital systems or skin are affected, and bone marrow diseases. The products of the invention are chemokine derivatives which have cytostatic, antiinflammatory, antiasthmatic. Chemokines act on specific tumor and inflammatory calls through a conscellation of chemokine receptors (CR), which control migration and prollferation of these cells. AAG80045 AAAG80128 represent human chemokine (A) are used for the diagnosis of tumors (especially colorectal fragments used to illustrate the method of the invention 88888888888888888888

mammalian cell (I) that contains a CD4 gene, reporter gene for identification of drugs and antibodies for treatment of Transformed and HIV LTR

Disclosure; Col 47-50; 37pp; English.

The present invention relates to a transformed mammalian cell that contains a gene encoding CD4, a construct encoding a reporter gene under the regulation of an human immuno deficiency virus (HIV) long terminal repeat (LTR) and that has been transduced with a vector encoding a human chemokine receptor (CKR) where the CD4 and the CKR are present on the call surface of transformed mammalian cell. The invention is useful for

The present sequence is human G-protein chemokine receptor (CCRS) HDGNR10 protein. CCRS HDGNR10 cDNA is included in ATCC Deposit No: 97183. CCRS HDGNR10 antibodies are useful for treating, preventing or amaliorating a disease or disorder associated with inflammation, defective or aberrant chemotaxis of immune cells, HTV infection (such as Pneumocystis carini presenting cell interaction. The disease or disorder may also be an infectious disease (e.g. a viral infection such as an early stage HIV infection, a cytomegalovirus infection, or a poxvirus infection, an autofunue disease (e.g. rheumatoid arthritis) or a neurodegenerative continum disease or disorder may be associated with aberrant CCRS disorder. The disease or disorder may be associated with aberrant CCRS carpression, lack of CCRS function. CCRS HDGNR10 protein is used as a food additive or preservative to increase or decrease storage capabilities. CCRS HDGNR10 DNA are useful for chromosome identification and in gene conternation or carbon are also useful in the diagnosis, treatment and prevention of cancer (breast, ovary, adrenal gland, bone, bone marrow, gastrointestinal tract, cutori, diabetes mellitus, continum abemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, continum and unitiple sclerosis, rheumatoid arthritis and ulcerative continum is candiovascular disorders (myocardial ischaemias) and wound continue then also designed to continue the diagnostic removed arthritis and ulcerative continue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated nucleic acid encoding a human G-protein chemokine receptor (CCRS) HDGNR10 polypeptide, useful for preventing or treating autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders and neurodegenerative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô

Isolated nucleic acid encoding a human G-protein chemokine receptor (CCRS) HOGNRIO polypeptide, useful for preventing or treating autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders and neurodegenerative disorders

Example 40; Page 486-487; 495pp; English.

The present sequence is human d-protein chemokine receptor (CCR5) HDGNR10

C protein. CCR5 HDGNR10 antibodies are useful for treating, preventing or
ameliotating a disease or disorder associated with inflammation,
defective or aberrant chemotaxis of immune cells, HTV infection (such as
C decrive or aberrant chemotaxis of immune cells, HTV infection (such as
CC derrant T-cell antigen presenting cell interaction. The disease or
C disorder may also be an infectious disease (e.g. a viral infection such
cs an early stage HIV infection, a dytemegalovirus infection, or a
CC disorder may also be an infection, a dytemegalovirus infection, or a
CC disorder may also be an infection, a disease or decrease
CC a neurodegenerative disorder. The disease or disorder may be associated
CC with aberrant CCR5 expression, lack of CCR5 function, aberrant CCR5
CC ligand expression, or lack of CCR5 ligand function. CCR5 HDGNR10 protein
CC is used as a food additive or preservative to increase or decrease
CC storage capabilities. CCR5 HDGNR10 DNA are useful for chromosome
CC identification and in gene therapy. CCR5 HDGNR10 DNA, protein,
CC antibodies, agonists and antagonists are also useful in the diagnosis,
CC treatment and prevention of cancer (breast, ovary, adrenal gland, bone,
CC bone marrow, gastrointestinal tract, liver, lung, urogenital); immune
CC disorders (Addison's disease, allergies, autoimmune haemolytic anaemia,
CC disorders (Malbaches mallitus, CCPA) is disease, multiple
CC disorders (myocardial ischaemias) and wound healing

New human G-protein chemokine receptor polypeptides and polynucleotides, useful for identifying (ant)agonists to the G-protein chemokine receptor

Claim 1a; Page 15; 22pp; English.

This invention describes a novel receptor polypeptide (1) selected from (1) a fully defined 329 amino acid sequence (II) fully disclosed in the epecification; and (ii) a polypeptide encoded by the DNA contained in a plasmid, and fragments, analogs and derivatives of the polypeptide. The products of the invention have antiinflammatory, immunomodulatory, antiporate, antiallergic, immunosuppressive, vulnerary, orfosteric, antiporate, antiporate, antiantinematic, antianthic and vasotropic activity and can be used for gene therapy. The G-protein chemokine activity and can be used for gene therapy. The G-protein chemokine activity and can be used for gene therapy. The G-protein chemokine activity and can be used for gene therapy. The G-protein chemokine also be used for stimulating of uncourse, chronic infections, leukemia, T-cell mediated autoimmune diseases, paraditic infections, psoriasis, and stimulating growth factor activity. HDGNRIO is useful for treating allergic reactions, prostaglandin-independent fever, bone marrow failure, estimulating syndrome. (N.B. Sequence 352 AA;

```
This sequence represents the human CCRS protein sequence. The invention relates to a method for determining whether an agent is capable of modulating the interaction of chemotractic chemokine receptor 5 (CCR5) with gp120, comprising incubating the agent with CCRS and gp120 and determining whether the agent modulates the interaction, where gp120 is associated with CDR, and where the interaction is a low affinity binding. The method is used to identify an agent capable of modulating the interaction of CCRS with gp120. An agent identified by the method is used to prepare a pharmaceutical composition for the treatment of a disease or condition associated with CCRS and gp120 interaction, to treat a subject with a disease or condition associated with CCRS and gp120 interaction, and for preparing a pharmaceutical for treating human immunodeficiency virus (HIV). It can also be treat anti-inflammatory diseases. The method is commercially useful, amenable to high throughput screening, and elects interaction of gp120 with cells expressing only CCR5.
                                                                                                                                                                                                                                                                                                                                                                                                           Determining if an agent can modulate CCR5-gp120 interaction, comprises incubating the agent with CCR5 and gp120 and determining if the agent modulates the interaction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying agonists of G protein-coupled receptors (GPCRs) for use in disease treatment, comprises contacting candidate compounds with versions of GPCRs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to G protein-coupled receptors (GPCRs) for which the endogenous ligand has been identified. Non-endogenous constitutively activated versions of known GPCRs are used in the invention for the direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists. Such agonists are useful as therappeutic agents for diseases or disorders associated with GPCRs. The present sequence is a non-endogenous version of a known human GPCR

The present sequence is that of human HIV-1 co-receptor CCR5. Amino acids 2-18 in the N-terminal region of CCR5 comprise an HIV-1 gpl20-binding 2-18 in the N-terminal region of CCR5 comprise an HIV-1 gpl20-binding 2 HIV-1 gpl20. Post-translational sulfation of the tyrosine residues in the HIV-1 gpl20. Post-translational sulfation of the tyrosine residues in the CCR5 N-terminal is required for gpl20 binding and may critically modulate the susceptibility of target cells to HIV-1 infection in vivo. The invention provides claimed sulfated peptides (see AAB8294) that are based on the CCR5 N-terminal region and which are effective for inhibiting HIV-1 binding to CCR5. These optides are used in claimed methods of inhibiting HIV infection of CD4+ cells, of preventing CD4+ cells from becoming infected with HIV, of tracating a subject whose CD4+ cells are infected with HIV, and of identifying an agent which inhibits binding of a CCR5 ligand to a CCR5 receptor. The methods may be carried cout in a subject, especially a human, infected (therapeutic method), not infected with HIV (prophylactic method), or in a subject who is not infected with, but has been exposed to, HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel compounds comprising specific amino acids within CCR5 (HIV 1 coreceptor) amino terminal domain including negatively charged and two sulfated tyrosine residues is useful for treating HIV infection in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4; Length 352;

The present invention relates to the isolation of a novel human G-protein chemokine receptor (CCR5) designated HDGNR10, and polynucleotide sequences encoding it. The invention also describes antibodies that bind human G-protein chemokine receptor (CCR5) HDGNR10 and polynucleotide chuman G-protein chemokine receptor (CCR5) HDGNR10 and polynucleotide sequences encoding the antibodies. The antibodies are useful for treating or preventing inflammation, defective or aberrant chemotaxis of immune cells and T-cell/antigen-presenting cell interactions, infections and autoimmune diseases, rheumatoid arthritis, neurodegeneration, viral infections despecially early-scage human immune deficiency virus (HIV), cytomegalovirus or pox virus infections, Kapoes sarcoma, or conditions associated with aberrant or deficient expression of the CCR5 receptor or its ligands. The antibodies are also useful to determine CCR5 expression, e.g. for diagnosis, prognosis and monitoring of cancer and other cyproricitic cent chemokine receptor, and in the treatment of a wide range of diseases such as infectious diseases (e.g. influenza), neurological diseases (e.g. combinant receptor, and in the treatment of a wide range of diseases such as infectious diseases (e.g. influenza), neurological diseases (e.g. HDGNR10 #1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, G-protein chemokine receptor, CCR5, HDGNR10, inflammation, immune cell chemotaxis, autoimmune disease, rheumatoid arthritis, neurodegeneration; viral infection; Kaposi sarcoma; cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠે
                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the isolation of a novel human G-protein chemokine receptor (CCRS) designated HDGNR10, and polymucleotide sequences encoding it. The invention also describes antibodies that bind human G-protein chemokine receptor (CCRS) HDGNR10 and polymucleotide sequences encoding the antibodies. The artibodies are useful for treating sequences encoding the antibodies. The artibodies are useful for treating cells and T-cell/antigen-presenting cell interactions, infections and autoimmune diseases, rheumatoid arthritis, neurodegameration, viral infections (especially early-stage human immune deficiency virus (HIV), cytomegalovirus or pox virus infections, Kaposi sarcoma, or conditions associated with aberrant or deficient expression of the CCRS receptor or its ligands. The antibodies are also useful to determine CCRS exceptor or its ligands. The antibodies are also useful to determine CCRS exceptor or its ligands. The diseases The polymucleotide sequences encoding human crombinant receptor, and in the treatment of a wide range of diseases such a infectious diseases (e.g. intluenza), neurological diseases (e.g. present sequence represents human G-protein chemokine receptor (CRS) HDGNR10 can be used to produce the present sequence represents human G-protein chemokine receptor. (CRS) Edecative diseases (e.g. cancer)

The invention relates to a method for identifying a binding compound for chemokine receptor 5 (CCR5). The method involves screening a library of ctest molecules (particularly peptides) with immobilised CCR5, and then identifying those molecules which bind. The invention also relates to identifying those molecules identified using the method of the invention. CC cRE-binding molecules identified using the method of the invention of transfer vector encoding tagged CCR5, a computer-aided methods for transfer vector encoding tagged CCR5, a computer-aided methods for a computer aided furug screening assay that utilises the three-dimensional structure of CCR5. Compounds identified using the methods of the invention are useful for treating or preventing HJV (human computer aided furug screening assay that utilises the three-dimensional structure of CCR5. Compounds identified using the methods of the invention are useful for treating or preventing HJV (human computer and patient. The methods of the invention may also be used to identify agonists or antagonists of the interaction of CCR5. The present screening and the interaction of CCR5. The present sequence represents a naturally or a binding motif for CCR5. The present sequence represents a naturally a leucine, at position 55 there is a glutamine, rather than a leucine, at position 55
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying CC chemokine receptor 5 binding compound for treating AIDS, comprises binding a molecule from library to a molecule having binding property corresponding to CCR5 and identifying bound molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                              25-JUL-2002
   The invention relates to a method for identifying a binding compound for CC chemokine receptor 5 (CCR5). The method involves screening a library of test molecules (particularly peptides) with immobilised CCR5, and then identifying those molecules which bind. The invention also relates to corps. Prinding those molecules identified using the method of the invention, methods for identifying consensus motified to CCR5-binding peptides, a transfer vector encoding tagged CCR5, a computer-aided methods for determining the relative binding affinity of a test molecule to CCR5 and a computer aided drug screening assay that utilises the three-dimensional structure of CCR5. Compounds identified using the methods of the invention are useful for treating or preventing HIV (human immunodeficiency virus) infection or AIDS (acquired immunodeficiency syndrome) in a patient. The methods of the invention may also be used to identify agonists or antagonists of the interaction of CCR5 with its natural ligand, and to determine a binding motif for CCR5. The present sequence represents human CCR5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                    CCR5; CC chemokine receptor 5; human; HIV infection; human immunodeficiency virus; AIDS; acquired immunodeficiency syndrome; drug screening; identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying CC chemokine receptor 5 binding compound for treating AIDS, comprises binding a molecule from library to a molecule having binding property corresponding to CCR5 and identifying bound molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The present invention relates to the isolation of human G-protein chemokine receptor, HDGNR10 (CCR5 receptor), and the polynucleotide sequences sequence encoding it. HDGNR10 polypeptide and polynucleotide sequences rate or useful for diagnosing a disease or a susceptibility to a disease rate or useful for diagnosing a disease or susceptibility to a disease care or useful for identifying modulators for stimulating haematopolesis, wound healing, coagulation, angiogenesis, to treat solid tumours, chronic infections, psoriasis, or for stimulating growth factor activity. The sequences are also useful for preventing and/or treating allergy, atherogenesis, anaphylaxis, malignancy, chronic and acute inflammation, histamine and immunoglobulin E (IgE)-mediated allergic reactions, prostaglandin-independent fever, bone marrow failure, sarcoidosis, rheumatoid arthritis, shock and hypercosning philic syndrome. Polynucleotide sequences encoding HDGNR10 can be used in gene therapy to treat conditions related to underexpression of HDGNR10. The present sequence represents human G-protein chemokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

(HUMA-) HUMAN GENOME SCI INC.

Roschke V, Rosen CA, Ruben SM;

WPI; 2002-643455/69. N-PSDB; ABS68606 New human G-protein Chemokine Receptor gene (HDGNR10) useful for treating, preventing, ameliorating or monitoring diseases or disorders associated with aberrant expression of HDGNR10 e.g. cancer.

Example 55; Fig 4; 562pp; English.

The invention describes an isolated polynucleotide encoding a first antibody at least 95-100% identical to a second antibody consisting of antibody at least 95-100% identical to a second antibody consisting of antibody at least 95-100% identical to a second antibody consisting of a variable heavy (VH) or variable light (VL) domain of thee antibody expressed by a hybridoma cell line consisting of XF3.5F1, XF11.1F8, XF37.68.1885, XF37.68.2851, XF27.28.36412. XF27.788.1885, XF27.28.2610, XF27.28.36412. XF27.28.36711 or XF27.78.18185. The antibody is useful treating, preventing, ameliorating, prognosing or monitoring cancers or other diseases or disorders e.g. immunologic deficiency inflammation associated disorders such as endotoxin lethality, nephritis and inflammatory bowel disease, conditions associated with an increase in certain haematopoietic cells such as histocytosis, defective or aberrant chemotaxis of immune cells or T-cell antigen presenting cell interaction, an infectious disease, an autoimmune disease such as Addison's disease, dermatitis and rheumatoid arthritis, allergies, a neurodegenerative or addisorder, a viral infection e.g. HIV infection, Cytomegalovirus or poxvirus infection, a Phenocytis carnii infection, Kaposi's sarcoma, cardiovascular disorder associated with aberrant expression of novel human Green content of human immunoglobulin sequence associated with the antibodies sequence of humagainst HDGNR10

Disclosure, Fig 1A-B; 562pp; English.

The invention describes an isolated polymucleotide encoding a first attibody at least 95-100% identical to a second antibody consisting of an extibody at least 95-100% identical to a second antibody consisting of amino acid sequence comprising at least one, two or three CDR regions of a variable heavy (VH) or variable light (VL) domain of the antibody consisting of XF3.512. XF21.086, XF22.362. XF22.362. XF22.362. XF22.362. XF22.362. XF22.362. XF22.362. XF22.362. XF22.362. XF22.263. XF22.263.

```
The invention relates to human G-protein chemokine receptor (CCR5), antibodies are used for the treatment or prevention of inflammation, defective or aberrant chemotaxis of immune cells or T cell antigen. presenting cell interaction, viral infections (specifically human immune deficiency (including its early stages), cytomegalo or pox viruses), autoimmune disease, rheumatoid arthritis, neurodegeneration, Pneumocystis carinii infection, Kaposi's sarcoma or any condition associated with detection, diagnosis, prognosis aroman or any condition associated with detection, diagnosis, prognosis and monitoring of cancers or other hyperproliferative diseases. The present sequence is human G-protein chemokine receptor (CCR5), HDGNR10 DNA
protein chemokine receptor (CCRS) HDGNR10. This is an amino acid sequence of Human G-protein chemokine receptor (CCRS) HDGNR10 #1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid encoding antibodies to the human CCR5 receptor HDGNR10, useful for treatment, prevention and diagnosis of e.g. cancer, also related antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                    Human; G-protein chemokine receptor; CCR5; HDGNR10 protein; cancer;
inflammation; viral infection; autoimmune disease; neurodegeneration;
rheumatoid archirits; Pneumocystis carinii infection; Kaposi's sarcoma;
hyperproliferative disease; receptor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human G-protein chemokine receptor (CCR5), HDGNR10 proteins and nucleic acid molecules encoding such proteins. CCR5 antibodies are used for the treatment or prevention of inflammation, defective or aberrant chemotaxis of immune cells or T cell antigenpresenting cell interaction, viral infections (specifically human immune deficiency (including its early stages), cytomegalo or pox viruses), autoimmune disease, rheumatoid arthritis, neurodegeneration, Pneumocystis carinii infection, Raposi's sarcoma or any condition associated with detection, diagnosis, prognosis and monitoring of cancers or other hyperproliferative diseases. The present sequence is human G-protein chemokine receptor (CCR5), HDGNR10 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid encoding antibodies to the human CCR5 receptor HDGNR10, useful for treatment, prevention and diagnosis of e.g. cancer, also

The invention relates to a novel human 7-transmembrane receptor, HDGNR10, which has been identified as a G-protein chemokine receptor. The dPCR HDGNR10 polypeptide can be expressed by standard recombinant methodology. Compounds that activate or inhibit the receptor polypeptide, optionally expressed from DNA in gene therapy vectors, are used to treat diseases that requires (a) activation of the receptor (e.g. stimulation of hasmatopoiseis, treatment of solid tumours, T-cell mediated autoimmune diseases, parasitic infections, psoriasis etc.); or (b) inhibition of the receptor (e.g. allergy, inflammation, rheumatoid arthritis, silicosis etc.). The present sequence represents the human HDGNR10 receptor New polynucleotide encoding a human G protein chemokine receptor HDGNR10, useful e.g. for treating tumors. Claim 7; Fig 1; 22pp; English.

New haplotypes of the human chemokine (C-C motif) receptor 5 gene, useful to diagnose and treat diseases associated with its abnormal expression or function, including human immunodeficiency virus-1 infection.

Claim 29; Fig 3; 61pp; English

The present sequence is that of a polypeptide encoded by the human chemokine (C-C motif) receptor 5 (CCR5) gene of the invention (see Chemokine, (C-C motif) receptor 5 (CCR5) gene of the invention (see Gene of an individual by determining if the individual has one of the CCR5 haplotypes or haplotype pairs fully defined in the specification.

CCR5 haplotypes or haplotype pairs fully defined in the specification.

CC CR5 haplotypes or haplotype pairs fully defined in the specification.

CC cr6 specification also describes an isogene defined in the specification of the servence CCR5 gene sequence and comprises an isogene defined by a haplotype described control of the specification and its sencoded polypeptide. The methods of the invention are useful to diagnose and develop treatment for diseases associated with abnormal expression or function of the gene. The CCR5 isogenes and the screened compounds are useful for treating human immunodeficiency virus (HrV)-1 infection and the progression to acquired immunodeficiency syndrome (AIDS). The invention has antiviral applications. The specification has antiviral and individual; predicting a haplotype pair for the CCR5 gene of an individual; predicting an association between a trait and a haplotype or composition comprising a genoryping oligonuclectide for detecting a CCR5 polymorphism; a recombinant non-human organism transformed with CCR5 conformed with CCR5 protein encoded by the variant sequence; an isolated antibody specific for the CCR5 polymorphism; and a method for correcting drugs targeting the CCR5 polymorphism; sequence of an isolated antibody specific for the CCR5 polymorphism; sequence of an isolated antibody specific for the CCR5 polymorphism; sequence of an isolated antibody specific for the CCR5 polymorphism; sequence of the CCR5 polymorphism; sequ

Novel human G-protein chemokine receptor polypeptide useful for diagnostic purposes and for identifying modulators of the polypeptide useful for treating leukemia, autoimmune diseases, psoriasis and allergic reactions. 

Claim 7; Fig 1; 22pp; English.

The invention discloses a G-protein chemokine receptor (sometimes referred to as a 7-transmembrane receptor) polypeptide, HDGNR10, and the polymynolacidectide encoding it. G-protein chemokine receptors are involved in signal transduction pathways. The polymucleotide and polypeptide can be compounds which activate or inhibit activation of the compounds are useful for treating a patient having need to activate or inhibit a G-protein chemokine receptor. The compound is administered by providing to the patient DNA encoding the agonist or catagonist and expressing them in vivo (gene therapy). The compound is disease or susceptibility to a disease related to an under-expression of the protein, for chromosome identification or as immunogens for producing attribodies. Agonists are useful in stimulating haematopoiesis, wound healing, coagulation, angiogenesis, to treat solid tumours, chronic infections, psoriasis and to stimulate growth factor activity.

Antagonists are useful in the prevention and steatement of allergy, antagonists are useful in the prevention and treatment of allergy, thistamine and ISB-mediated allergic reactions, prostaglandin-independent fewer, bone marrow failure, silicosis, sarcoidosis, rheumatoid arthritis, content of an dhypaption, and hypaptic sarcoidosis, rheumatoid arthritis, content of an hypothemial silicosis, sarcoidosis, rheumatoid arthritis, content of an hypothemial silicosis, sarcoidosis, rheumatoid arthritis, content of the provention and secution in the prevention content of the provention and coute inflammation, content of allergy contents and hypertonesis.

Wilson KE; Gish KC, Hevezi PA, Mack DH, Aziz N, Zlotnik Mfar D,

2003-354600/33. N-PSDB; ACC72740. New genes that are up-regulated or down-regulated in cancers, useful a markers for diagnosing e.g. cancer, ischemia or heart diseases, or as therapeutic targets for screening drugs for treating these diseases.

Claim 12; Page 745; 767pp; English.

The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or down-regulated in specific cancers (e.g. about 1013 genes up-regulated in culture lamphocytic leukemia). ACC72641 to ABC702860 represent cancer related gene nucleotide sequences which encode the proteins given in ABC80502. Also described: (1) determining the presence or apsence of a pathological cell in aptient; (2) an expression vector comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a patient by administering to the patient the antibody above; and (7) a patient by administering to the patient the antibody above; and (7) a patient by administering to the patient, the nucleic acid is useful for diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, bladder, brain, breast, cervix, colon/rectum, kidney, lung, overy, colon/rectum, kidney, lung, overy, colon/rectum, kidney, lung, overy, and colon and uterus), wounds, ischaemia, heart diseases, and endometriosis. The nucleic acid is also useful in a pathology, as a pathology, and uterus), wounds, ischaemia, heart diseases, and and endometriosis. The nucleic acid is also useful in a pathology, pathology, pathology, and uterus), wounds, ischaemia, heart diseases, and endometriosis. The nucleic acid is also useful in pathologies

```
The invention relates to a method for treating an urological disorder which comprises assaying the ability of the compound to modulate 313, 313, 5464, 188717 or 3354 mucleic acid expression or polypeptide activity. The method is useful for identifying a compound for treating urological disorder comprising urinary incontinence e.g., overactive/oversensitive bladder, overflow uninary incontinence, stress urinary incontinence caused by defunction of the bladder, urethra or central/peripheral nervous system, prostatitis, benign prostatic hyperplasia, prostate cancer or kidney disorders. It is also used in gene therapy. The present sequence is human C-C chemokine receptor type 5 (CCRS, 333) protein. This sequence is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

The invention relates to a method of producing an antibody, involving immunising an animal with a human G-protein chemokine receptor (HDGNR10) polypeptide (also referred to as a human 7-transmembrane receptor) and recovering an antibody which binds the polypeptide. The method is useful for producing an antibody which binds specifically to the human G-protein chemokine receptor polypeptide. This sequence represents the HDGNR10 polypeptide of the invention
                                                                                                                                                                                                                                                                                                                        Producing an antibody, involves immunizing an animal with a polypeptide or with a polypeptide encoded by the human G-protein chemokine receptor clone in ATCC 97183, and recovering the antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gabs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, chemokine receptor, CCR5, viral infection, surface protein,

G protein-coupled receptor; GPCR; antigenic peptide; gene therapy; G protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; cell regeneration-related disease; AIDS; cancer; immunological-related cell proliferative disease; autoimmune disease; Alzheimer's disease; atheroselerosis; infection; osteoarthritis; allergy; osteoporosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; epilepsy; asthma; tuberculosis; obesity; nausea; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma; The present sequence represents human chemokine receptor CCR5. The specification describes a method for modulating viral infection of a cell. the method comprises modulating a binding interaction between a cell chemokine-receptor and a surface protein of the virus. The provise is that the cell chemokine-receptor is not CX3CR1 and that the virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchiolitis, Modulating viral infection of a cell, for treating or preventing respiratory virus infections, bronchitis, pneumonia or asthma, by modulating a binding interaction between a cell chemokine-receptor 100.0%; Score 96; DB 6; Length 352; 100.0%; Pred. The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (i) an isolated antibody having high specificity and high affinity or anticly for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR. (I) can be useful for detecting an antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, cell regeneration-related diseases, growth-related diseases, cell regeneration-related diseases, growth-related diseases, cell corresponding GPCRs. The antigenic peptides for treating immune-related diseases, growth-related diseases, cell atherosclerosis, bacterial, fungal, protozoan or viral infections, atherosclerosis, bacterial, fungal, protozoan or viral infections, cesecoarthritis, osteoporosals, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, graft versus host disease, parkinson's disease, multiple sclerosis, pain, psoriasis, constitution, allergies, cancer, cardiomyopathy, chronic and acute circliammation, rehard disorders, rheumatoid arthritis, trauma, ulcers, or any other disorders in which GPCRs are involved. The antibodies may be used in immunoassays and immunoaisapness, ABP82523 to ABZ42869 encode GPCR proteins given in ABP81675 to ABZ42869 encode ceremonic and acute invention of the present invention ö Gaps .; 0 Length 352; 0; Indels 100.0%; Score 96; DB 6; L 100.0%; Pred. This protein sequence comprises an Ala127Leu variant of a novel human macrophage-selective CC chemokine receptor (see also AAW23835) that has been designated CCR5. The sequence was deduced from an isolated cDNA clone (see AAT76919). The conservative variation should not affect the activity of CCR5. The susceptibility of human macrophages to HIV activity of CCR5. The susceptibility of human macrophages to HIV activity of CCR5. The susceptibility of depends on call surface expression of CD4 and CCR5. CCR5 is a comper of the 7-transmembrane superfamily of G-protein coupled cell surface molecules. It plays an essential role in the membrane fusion step of infection by some HIV isolates. The establishment of stable, non-human CCR infection by some HIV isolates. The establishment of stable, non-human cCR provides valuable tools for research of HIV infection.

Antibodies that bind to CCR5, CCR5 variants, and CCR5-binding agents capable of blocking membrane fusion between HIV and target cells represent potential anti-HIV therapeutics for macrophage tropic strains of HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Prostaglandin; PG; E2EP3 receptor; E2EP2 receptor; CCR-5; human; chemokine receptor; ss2 adrenergic receptor; small G-protein rho; renal outer medullary potassium ion channel protein; ion-channel protein; lambda phage repressor protein; G-protein coupled receptor; bacteria; biochemical; vaccine; immunohistochemical; orphan receptor; HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC chemokine receptor 5 polypeptide - used to inhibit membrane fusion between HIV and a target cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to screening for a modulator of human immunodeficiency virus (SIV) or simian immunodeficiency virus (SIV) or simian immunodeficiency virus (SIV) infection, comprising contacting a first composition having an European of the Second composition having an HV or SIV envelope protein in the second composition having an HV or SIV envelope protein in the presence or absence of a compound. Also included are screening for a modulator of HIV infection, detecting HIV infection of cells (comprising contacting a cell that has been recombinantly modified to express at cast one of human chemokine receptors 86 and 88-28 with HIV, and detecting HIV infection in the cell) and inhibiting HIV infection of cells (comprising contacting cells with an antibody to at least one of numan chemokine receptors 88 and 88-28 with HIV, and detecting HV infection of the cell after the contacting step). The methods and compositions of the present invention are useful for the diagnosis and treatment of disorders associated with the aberrant expression or activity of 88C or 88-2B chemokine receptors, such as atherosolerosis, rheumatoid arthritis, tumour growth suppression, as the conditions. Also and other inflammatory conditions. The genes for human 88-C and 88-C an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                  Screening for a modulator of HIV and SIV infection utilizing polynucleotides that encode the 88C or 88-2B chemokine receptors, useful for diagnosing and treating disorders such as atherosclerosis, arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC chemokine receptor 5; CCR5; G-protein coupled receptor; human immunodeficiency virus; HIV; CD4; AIDS; therapy; transgenic animal.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention provides isolated nucleic acid sequences that encode rabbit prostaglandin (PG) E2EP3 receptor, human PG E2EP2 receptor, rat renal outer chemokine receptor CRF-5, human se2 adranergic receptor, rat renal outer medullary potassium ion channel protein or human small G-protein rho, together with deduced protein sequences. Also provided is a method for the production of enkaryctic proteins by culturing bacteria transformed with vectors containing the above mucleic acid sequences or a nucleic acid (I) that comprises: (i) first sequence that encodes either a DNA-binding protein, or a lambda phage repressor protein, placed upstream of, and in frame with, (ii) a sequence encoding a protein, placed upstream of, and in frame with, (ii) a sequence encoding a protein, (I) are used for recombinant production of eukaryctic proteins, particularly membrane proteins groteins are useful for biochemical or structural studies; and the encoding a protein sin vaccines, and diagnostic and screening assays and as antigens for use in vaccines, and for raising antibodies that are useful can encode second completed and proteins are useful for proper or complete capence against the chemokine receptor CCR-5 can be used (when administered as antiserum or generated in vivo) to prevent complete complete capence or used (when administered as antiserum or generated in vivo) to prevent complete capence or capence capence or complete capence or capence capence or c
                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid constructs for high level expression of eukaryotic proteins in bacteria, for producing e.g. chemokine receptor CCR-5 for preventing HIV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Page 49-53; 81pp; English

AAW27125 standard; protein; 352 AA Macaque chemokine receptor 88C. (first entry) 14-DEC-1997 AAW27125; 40 RESULT 40 

Chemokine receptor 88C; atherosclerosis; rheumatoid arthritis; tumour; asthma; viral infection; AIDS; inflammation; autoimmune disease; therapy; diagnosis; leukocyte trafficking; G protein coupled receptor; ligand; modulator; antibody.

Macaca

```
This polypeptide sequence comprises macaque chemokine receptor 88C, a G protein coupled receptor that is involved in leukocyte trafficking. Its amino sequence was deduced from a 88C DNA (AAR82163) isolated by PCR amplification. It shows 97% identity to human 88C (AAM27123). 88C receptors and their polypeptide fragments can be produced in transformed host cells. The receptors, peptides comprising one or more of the extracellular or intracellular domains, and anti-receptor antibodies can be used to modulate receptor activities, particularly ligand and G protein binding, and are potentially potentially useful in the treatment of atheroslerosis, rheumatoid arthritis, tumours, asthma, viral infection, AIDS, inflammatory conditions, pathological immune response, abnormal haematopoietic processes etc. A hybridoma that produces an antibody that specifically binds to macaque 88C is claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ç

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

| Sequence 2, Application US/09725285
| Patent No. US2001000241A1
| GENERAL INFORMATION:
| APPLICANT: Li, Yi
| APPLICANT: Li, Yi
| APPLICANT: Ruben, Steven, M.
| TILE OF INVENTION: Antibodies to Human G-Protein Chemokine Receptor HDGNR10
| TILE OF INVENTION: (CCR5 Receptor)
| FILE REFERENCE: 1488.1150003
| FILE REFERENCE: 1488.1150003
| CURRENT APPLICATION NUMBER: US/09/725,285
| PRIOR APPLICATION NUMBER: 09/339,912
| PRIOR FILING DATE: 1999-06-25
| PRIOR FILING DATE: 1998-11-18
| PRIOR FILING DATE: 1998-11-18
| PRIOR FILING DATE: 1995-06-06
| NUMBER OF SEQ ID NOS: 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                               APPLICANT: SAWSON, MICHEL
PARMENTIER, MARC
VASSART, GILBERT
LIBERT, FREDERICK
TITLE OF INVENTION: ACTIVE AND INACTIVE CC-CHEMOXINES RECEPTOR
AND NUCLEIC ACID MOLECULES ENCODING SAID RECEPTOR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                  COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARB: PatentIn Release #1.0, Version #1.25 (EPO)
CURRENT APPLICATION DATA:
FLING DATE: 24-Aug-2001
CLASSIFICATION: «Unknown»
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 54;
